Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives — what they Say, Think, Do, and Feel — in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • I need to know which crop will give me the best yield this season. • I enter my soil details but I don't understand the results. • I want a simple recommendation I can act on immediately.		THINKS • Will this AI system actually work better than traditional advice? • What if the recommendation is wrong and I lose my investment? • Is this tool easy enough for someone with no tech background?
	PERSONA Ravi Kumar (Small-scale Farmer / Primary User)	
DOES • Manually tests soil using basic kits and records N, P, K values. • Consults local farmers and agents for crop selection advice. • Uses the OptiCrop app to input soil and climate parameters.		FEELS • Anxious about crop failure and financial losses. • Hopeful that data-driven insights will improve productivity. • Relieved when the system provides a clear, actionable recommendation.
